Re: Griffin Health and Safety

To whom it may concern:

This letter is in reference to Griffin Health and Safety (Pty) Ltd in regard to both its methodology approach and the quality of its consultants.

Griffin Health and Safety (Pty) Ltd is duty-bound and ensuring effective communication throughout our tunnelling projects. For our company, it was important to not only have quality work in our processes, but also to improve our health and safety.

Griffin Health and Safety (Pty) Ltd traveled to our site several times and conducted inspections / audits to ensure compliance with the Occupational Health & Safety Act 85 of 1993 and captured all of our key requirements and eliminating risk factors. In addition, they facilitated workshops / induction that enabled us to define and optimize our safety to align with our company OHS goals. This enabled us to mitigate our risk factors ensuring a safe place of work.

Implementing health and safety can be a difficult process with many associated risks. The Griffin team helped us address the risks and positioned us for the successful implementation of our safety management. It is not only important to take the appropriate steps when selecting a safety vendor, but to have an unbiased partner you trust help guide you through the process. I highly recommend Griffin Health and Safety as a trusted partner for all health and safety related issues,

Regards,

Aidan Ryan
